Wajeeha Imran

BS Computer Science Student @ FAST | Machine Learning & AI Enthusiast | Building Real-World AI Projects | Python • C++ • Git
Faisalabad Division, Punjab, Pakistan

Summary

Passionate about building intelligent systems through Artificial Intelligence, Machine Learning, and Software Development. I am a BS Computer Science student at the National University of Computer and Emerging Sciences (FAST) with a strong interest in Artificial Intelligence, Machine Learning, Computer Vision, and Software Engineering. Rather than relying only on pre-built libraries, I enjoy understanding the mathematics and algorithms behind machine learning by implementing models from scratch and applying them to real-world problems. Throughout my learning journey, I have built projects that strengthen both my technical knowledge and problem-solving skills. My work includes Logistic Regression from Scratch, Student Support Early Warning System, Image Classification, Interactive Terminal Portfolio, and AI-focused research, while continuously expanding my portfolio with new machine learning applications. Currently, I am focused on: Machine Learning & Artificial Intelligence # Computer Vision & Image Classification Python & C++ Software Development Git & GitHub Data Structures & Algorithms (Learning) I believe in learning by building, documenting my journey, and continuously improving through hands-on projects. My goal is to develop impactful AI solutions, contribute to meaningful technology projects, and grow as an engineer through continuous learning and collaboration. Open to AI, Machine Learning, Software Engineering, Research, and International Internship Opportunities

Education

National University of Computer and Emerging Sciences
Bachelor's degree, Computer Science · (2025 - 2029)
